

MOHMMAD ALSHEIKH

.NET BACK-END DEVELOPER

Al-Kiswah, Rif Dimashq, Syria | +963 997102470 | veb2018s@gmail.com
github.com/mohmmad-alsheikh | linkedin.com/in/mohmmad-alsheikh | codeforces.com/mo.sheikh | ICPC: VGUX5H9NIHZ3

PROFESSIONAL SUMMARY

Results-driven Software Engineering student specializing in .NET back-end development, with hands-on experience designing and building RESTful Web APIs, relational databases, and secure, scalable application architectures using C#, ASP.NET Core, and SQL Server. Skilled in object-oriented design, 3-tier architecture, and query optimization, with a strong analytical foundation developed through C++ programming and national-level competitive programming contests. Committed to writing clean, maintainable code and continuously expanding expertise in modern back-end engineering practices.

TECHNICAL SKILLS

Languages	C#, C++, SQL, T-SQL
Frameworks & Technologies	.NET / .NET Core, ASP.NET Core Web API, ADO.NET, Entity Framework Core (EF Core), Windows Forms
Databases	SQL Server, Stored Procedures, Relational Database Design, Query Optimization
Architecture & Concepts	RESTful API Design, Web API Security (JWT, Roles & Policies), 3-Tier Architecture, Clean Architecture Foundations, OOP, Data Structures & Algorithms, SOLID Principles (in progress)
Tools & Practices	Git, GitHub, Version Control, Problem Solving, Competitive Programming, Agile Teamwork
Soft Skills	Analytical Thinking, Team Collaboration, Time Management, Attention to Detail

KEY PROJECTS

UniPlan – Academic Scheduling & Planning System Back-End Developer (Team) C#, ASP.NET Core Web API, ADO.NET, SQL Server	github.com/QFM-Company/UniPlan
- Co-developed a back-end Web API service that automatically generates optimal, conflict-free weekly course schedules for university students. - Architected SQL Server database schemas and stored procedures to manage course capacities and deliver student-demand analytics to administrators.	
DVLD – Driving & Vehicle License Department System Desktop Developer C#, WinForms, ADO.NET, SQL Server	github.com/mohmmad-alsheikh/DVLD
- Engineered a full-featured desktop management system built on a 3-Tier Architecture for clear separation of concerns. - Delivered core workflows including multi-stage testing (vision, written, practical), license issuance and renewal, and role-based user access control.	
Public Transport Network Management System Core Developer (Team) C++, Custom Data Structures, File Handling	Academic Team Project
- Built a console application using custom data structures to automate transport line management, bus stops, queuing, and passenger ticketing. - Implemented file-based persistent storage and graph-based algorithms to optimize shortest-route and least-cost calculations between stations.	

TRAINING & CERTIFICATIONS

Independent Study

- C++ Programming Fundamentals, Data Structures, and Object-Oriented Programming (OOP) – self-directed coursework.

Programming Advices Academy – .NET & Back-End Roadmap

11 Courses Completed

- C# Programming – Level 1
- C# Programming – Level 2
- OOP As It Should Be in C#
- Database Level 1 – SQL (Concepts & Practice)
- Database Level 2 – Concepts & T-SQL
- Database SQL (Projects & Practice)
- C# & Database Connectivity (ADO.NET)
- Entity Framework Core Fundamentals (EF Core)
- Introduction to RESTful API
- Secure Your APIs (JWT, Roles & Policies in ASP.NET Core)
- Data Structures Level 2 in C#

COMPETITIVE PROGRAMMING

SCPC 2026 – Syrian Collegiate Programming Contest, Participant.
SYPU-CPC 2026 – Syrian Private Universities Competitive Programming Contest, Participant.
ASPU-CPC 2026 – Al-Sham Private University Competitive Programming Contest, Participant.
Active problem solver on **Codeforces**; verified **ICPC Global** profile holder.

LANGUAGES

Arabic – Native
English – Intermediate (Technical Reading & Writing)

EDUCATION

B.Sc. in Software Engineering 2023 – Expected 2027
Al-Sham Private University (ASPU) – Damascus, Syria
